Slides typeset elsewhere

A PDF of three pages, opened by Zoomdeck as it is.

Each page is a slide. The player cuts from one to the next, the bookmarks of the document name the pages, and the text stays sharp at any size because each page is drawn at the density of the screen.

A formula

The Gaussian integral, as LaTeX set it:

$$\int_{-\infty}^{\infty} e^{-x^2}\,dx = \sqrt{\pi}$$

and Euler's identity, $e^{i\pi} + 1 = 0$, in the running text.

The last page

Everything the player does works here too: the spotlight and the laser, the pen, the whiteboard, recording a talk and printing. Press the left arrow to go back.
